

CROSS LAMINATED TIMBER

Sterling CLT panels are manufactured using Southern Pine No. 2 lumber — a readily available, sustainable, and cost-effective species group grown in the USA. This material provides strength, warmth, and character consistent with the natural qualities of mass timber construction.

The finish shown in the images represents our visual appearance grade, installed and celebrated on numerous commercial, institutional, and residential projects. Natural variations in tone, grain, and knots are part of the authentic expression of our Nation's vibrant Southern Pine forests and contribute to TerraLam's distinctive visual warmth.

WHY MASS TIMBER?
